EDUCATION

•Bachelor of Technology in Computer Science and Engineering

Parul University, Vadodara

2023 - Present

CGPA: 8.83

SKILLS

Languages: Python, C/C++, Java, HTML+CSS

Libraries : NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn, TensorFlow, PyTorch, LangChain ,Flask

Tools: Jupyter Lab, VScode, Git/Github, Tableau, Power BI, Excel

Databases: MongoDB, MySQL

Cloud: AWS

PROJECTS

•Next Word Prediction

[\[Source Code\]](#)

A Machine Learning-based NLP system that predicts the next word in a sentence using trained language models to understand contextual text patterns.

- Developed a next-word prediction model using NLP techniques and sequence modeling (LSTM / Transformer / N-gram).
- Implemented text preprocessing including tokenization, padding, and sequence generation for training.
- Built prediction pipeline to generate context-aware word suggestions based on input text.
- Integrated a UI using Streamlit for real-time interaction and text prediction.
- **Tech Stack:** Python, TensorFlow / PyTorch, NLTK / spaCy, NumPy, Pandas, Streamlit

•Loan Default Prediction

[\[Source Code\]](#)

A Machine Learning-based classification system that predicts whether a loan applicant is likely to default using historical financial data and statistical modeling.

- Built a predictive model using Logistic Regression to classify loan default risk.
- Performed data cleaning, preprocessing, and feature engineering using Pandas and NumPy.
- Trained and evaluated the model using Scikit-learn, achieving 88% accuracy on test data.
- Implemented evaluation metrics to assess model performance and reliability.
- **Tech Stack:** Python, Pandas, NumPy, Scikit-learn, Jupyter Notebook

•Email Spam Prediction using SVC

[\[Source Code\]](#)

A Machine Learning-based text classification system that detects whether an email is Spam or Not Spam (Ham) using TF-IDF features and a Support Vector Classifier.

- Performed email text preprocessing including tokenization, stopwords removal, and stemming/lemmatization.
- Converted textual data into numerical features using TF-IDF vectorization.
- Implemented Support Vector Classifier (SVC) for accurate spam classification.
- Evaluated model performance using Accuracy, Precision, Recall, F1-score, and Confusion Matrix.
- **Tech Stack:** Python, Scikit-learn, Pandas, NumPy, NLTK / spaCy, Matplotlib / Seaborn

CERTIFICATIONS

• Complete Data Science, Machine Learning, DL, NLP Bootcamp

Krish Naik, KRISHAI Technologies Private Limited

Verify

ACHIEVEMENTS

• Qualified GATE 2026 Exam – Data Science and Artificial Intelligence (DA)

ADDITIONAL

- Preparing for **GATE-2027** (Data Science & Artificial Intelligence – DA)
- Focused on Data Science, Machine Learning, AI, Statistics, DBMS and Data Warehousing
- Currently developing a Generative AI project utilizing Retrieval-Augmented Generation (RAG)
- Actively exploring and implementing Agentic AI for autonomous workflows
